

1. Consider the following code segment.

```
String str1 = new String("Advanced Placement");
String str2 = new String("Advanced Placement");
if (str1.equals(str2) && str1 == str2)
{
        System.out.println("A");
}
else if (str1.equals(str2) && str1 != str2)
{
        System.out.println("B");
}
else if (!str1.equals(str2) && str1 == str2)
{
        System.out.println("C");
}
else if (!str1.equals(str2) && str1 != str2)
{
        System.out.println("C");
}
```

What, if anything, is printed when the code segment is executed?

- (A) A
- (B) B
- (C) C
- (D) D
- (E) Nothing is printed.
- 2. Consider the following method that is intended to determine if the double values d1 and d2 are close enough to be considered equal. For example, given a tolerance of 0.001, the values 54.32271 and 54.32294 would be considered equal.

Which of the following should replace / * missing code * / so that almostEqual will work as intended?

```
(A) return (d1 - d2) <= tolerance;</li>
(B) return ((d1 + d2) / 2) <= tolerance;</li>
(C) return (d1 - d2) >= tolerance;
(D) return ( (d1 + d2) / 2) >= tolerance;
(E) return Math.abs(d1 - d2) <= tolerance;</li>
```

3. Consider the following method, between, which is intended to return true if x is between lower and upper, inclusive, and false otherwise.

```
// precondition: lower <= upper

// postcondition: returns true if x is between lower and upper,

// inclusive; otherwise, returns false

public boolean between(int x, int lower, int upper)

{
    /* missing code */
}</pre>
```

Which of the following can be used to replace /* missing code */ so that between will work as intended?

- (A) return ($x \le lower$) && ($x \ge lower$);
- (B) return $(x \le lower) || (x \ge upper);$
- (C) return lower $\leq x \leq upper$;
- (D) return $(x \ge lower) & (x \le upper)$;
- (E) return $(x \ge lower) \parallel (x \le upper)$;

4. Consider the following method, biggest, which is intended to return the greatest of three integers. It does not always work as intended.

```
public static int biggest(int a, int b, int c)
{
   if ((a > b) && (a > c))
   {
     return a;
   }
   else if ((b > a) && (b > c))
   {
     return b;
   }
   else
   {
     return c;
   }
}
```

Which of the following best describes the error in the method?

- (A) biggest always returns the value of a.
- (B) biggest may not work correctly when c has the greatest value.
- (C) biggest may not work correctly when a and b have equal values.
- (D) biggest may not work correctly when a and c have equal values.
- (E) biggest may not work correctly when b and c have equal values.

5. A teacher put three bonus questions on a test and awarded 5 extra points to anyone who answered all three bonus questions correctly and no extra points otherwise. Assume that the boolean variables bonusOne, bonusTwo, and bonusThree indicate whether a student has answered the particular question correctly.

Each variable was assigned true if the answer was correct and false if the answer was incorrect.

Which of the following code segments will properly update the variable grade based on a student's performance on the bonus questions?

```
I. if (bonusOne && bonusTwo && bonusThree)
  grade += 5;
III. if (bonusOne || bonusTwo || bonusThree)
  grade += 5;
III. if (bonusOne)
  grade += 5;
  if (bonusTwo)
  grade += 5;
  if (bonusThree)
  grade += 5;
(A) I only
(B) II only
(C) III only
```

(D) I and III(E) II and III

6. Consider the following class definitions.

```
public class Person
     private String name;
     public String getName()
     { return name;
}
public class Book
     private String author;
     private String title;
     private Person borrower;
     public Book(String a, String t)
         author = a;
         title = t;
         borrower = null;
     public void printDetails()
         System.out.print("Author: " + author + " Title: " + title);
         if ( /* missing condition */ )
      System.out.println(" Borrower: " + borrower.getName());
     public void setBorrower(Person b)
     { borrower = b; }
}
```

Which of the following can replace /* missing condition */ so that the printDetails method CANNOT cause a run-time error?

```
I. !borrower.equals(null)
II. borrower != null
III. borrower.getName() != null
```

- (A) I only
- (B) II only
- (C) III only
- (D) I and II
- (E) II and III
- 7. Assume that a, b, and c are boolean variables that have been properly declared and initialized. Which of the following boolean expressions is equivalent to ! (a && b) || c?

- (A) a && b && c
- (B) a || b || c
- (C) !a && !b || c
- (D) !a && !b && c
- (E) !a || !b || c
- **8.** Assume that the boolean variables a and b have been declared and initialized. Consider the following expression.

$$(a \&\& (b || !a)) == a \&\& b$$

Which of the following best describes the conditions under which the expression will evaluate to true?

- (A) Only when a is true
- (B) Only when b is true
- (C) Only when both a and b are true
- (D) The expression will never evaluate to true.
- (E) The expression will always evaluate to true.
- **9.** Assume that the boolean variables a, b, c, and d have been declared and initialized. Consider the following expression.

$$!(!(a \&\& b) || (c || !d))$$

Which of the following is equivalent to the expression?

- (A) (a && b) && (!c && d)
- (B) (a || b) && (!c && d)
- (C) $(a \&\& b) \| (c \| !d)$
- (D) $(!a \parallel !b) \&\& (!c \&\& d)$
- (E) !(a && b) && (c || !d)

10. Consider the following class declaration

```
public class SomeClass
{
 private int num;
 public SomeClass(int n)
 {
  num = n;
 }
 public void increment(int more)
 {
  num = num + more;
 }
 public int getNum()
 {
  return num;
 }
}
```

The following code segment appears in another class.

SomeClass one = new SomeClass(100);

```
SomeClass two = new SomeClass(100);
SomeClass three = one;
one.increment(200);
System.out.println(one.getNum() + " " + two.getNum() + " " + three.getNum());
```

What is printed as a result of executing the code segment?

- (A) 100 100 100
- (B) 300 100 100
- (C) 300 100 300
- (D) 300 300 100
- (E) 300 300 300

11. Consider the following code segment, which is intended to simulate a random process. The code is intended to set the value of the variable event to exactly one of the values 1, 2, or 3, depending on the probability of an event occurring. The value of event should be set to 1 if the probability is 70 percent or less. The value of event should be set to 2 if the probability is greater than 70 percent but no more than 80 percent. The value of event should be set to 3 if the probability is greater than 80 percent. The variable randomNumber is used to simulate the probability of the event occurring.

```
int event = 0;
if (randomNumber <= 0.70)
{
     event = 1;
}
if (randomNumber <= 0.80)
{
     event = 2;
}
else
{
     event = 3;
}</pre>
```

The code does not work as intended. Assume that the variable randomNumber has been properly declared and initialized. Which of the following initializations for randomNumber will demonstrate that the code segment will not work as intended?

- (A) randomNumber = 0.70;
- (B) randomNumber = 0.80;
- (C) randomNumber = 0.85;
- (D) randomNumber = 0.90;
- (E) randomNumber = 1.00;
- 12. Consider the following Boolean expressions.

```
I.
A && B
II.
!A && !B
```

Which of the following best describes the relationship between values produced by expression I and expression II?

- (A) Expression I and expression II evaluate to different values for all values of A and B.
- (B) Expression I and expression II evaluate to the same value for all values of A and B.
- (C) Expression I and expression II evaluate to the same value only when A and B are the same.
- (D) Expression I and expression II evaluate to the same value only when A and B differ.
- (E) Expression I and expression II evaluate to the same value whenever A is true.

13. Consider the following two code segments where the int variable choice has been properly declared and initialized.

```
Code Segment A
if (choice > 10)
     System.out.println("blue");
}
else if (choice < 5)
     System.out.println("red");
else
{
     System.out.println("yellow");
                                 Code Segment B
if (choice > 10)
     System.out.println("blue");
if (choice < 5)
     System.out.println("red");
}
else
{
     System.out.println("yellow");
```

Assume that both code segments initialize choice to the same integer value. Which of the following best describes the conditions on the initial value of the variable choice that will cause the two code segments to produce different output?

- (A) choice < 5
- (B) choice \geq 5 and choice \leq 10
- (C) choice > 10
- (D) choice == 5 or choice == 10
- (E) There is no value for choice that will cause the two code segments to produce different output.

14. Consider the following code segments, which are each intended to convert grades from a 100-point scale to a 4.0-point scale and print the result. A grade of 90 or above should yield a 4.0, a grade of 80 to 89 should yield a 3.0, a grade of 70 to 79 should yield a 2.0, and any grade lower than 70 should yield a 0.0.

Assume that grade is an int variable that has been properly declared and initialized.

```
Code Segment I
double points = 0.0;
if (grade > 89)
     points += 4.0;
else if (grade > 79)
     points += 3.0;
else if (grade > 69)
     points += 2.0;
}
else
     points += 0.0;
System.out.println(points);
                                 Code Segment II
double points = 0.0;
if (grade > 89)
     points += 4.0;
if (grade > 79)
{
     grade += 3.0;
if (grade > 69)
     points += 2.0;
if (grade < 70)
     points += 0.0;
```

System.out.println(points);

Which of the following statements correctly compares the values printed by the two methods?

- (A) The two code segments print the same value only when grade is below 80.
- (B) The two code segments print the same value only when grade is 90 or above or grade is below 80.
- (C) The two code segments print the same value only when grade is 90 or above.
- (D) Both code segments print the same value for all possible values of grade.
- (E) The two code segments print different values for all possible values of grade.

15. Consider the following code segment in which the int variable x has been properly declared and initialized.

```
if (x % 2 == 1)
{
         System.out.println("YES");
}
else
{
         System.out.println("NO");
}
```

Assuming that \times is initialized to the same positive integer value as the original, which of the following code segments will produce the same output as the original code segment?

```
I.
if (x % 2 == 1)
     System.out.print("YES");
if (x % 2 == 0)
     System.out.println("NO");
                                       II.
if (x % 2 == 1)
     System.out.println("YES");
else if (x % 2 == 0)
     System.out.println("NO");
}
else
     System.out.println("NONE");
                                      III.
boolean test = x % 2 == 0;
if (test)
{
     System.out.println("YES");
else
{
     System.out.println("NO");
```

}

- (A) I only
- (B) II only
- (C) III only
- (D) I and II only
- (E) I, II, and III
- 16. Assume obj1 and obj2 are object references. Which of the following best describes when the expression obj1 == obj2 is true?
 - (A) When obj1 and obj2 are defined within the same method
 - (B) When obj1 and obj2 are instances of the same class
 - (C) When obj1 and obj2 refer to objects that contain the same data
 - (D) When obj1 and obj2 refer to the same object
 - (E) When obj1 and obj2 are private class variables defined in the same class
- 17. Consider the following declarations.

int valueOne, valueTwo;

Assume that valueOne and valueTwo have been initialized. Which of the following evaluates to true if valueOne and valueTwo contain the same value?

- (A) valueOne.equals((Object) valueTwo)
- (B) valueOne == valueTwo
- (C) valueOne.compareTo((Object) valueTwo) == 0
- (D) valueOne.compareTo(valueTwo) == 0
- (E) valueOne.equals(valueTwo)
- 18. Which of the following best describes the value of the Boolean expression shown below?

```
a && !(b || a)
```

- (A) The value is always true.
- (B) The value is always false.
- (C) The value is true when a has the value false, and is false otherwise.
- (D) The value is true when b has the value false, and is false otherwise.
- (E) The value is true when either a or b has the value true, and is false otherwise.
- **19.** Assume that x and y are boolean variables and have been properly initialized.

Which of the following best describes the result of evaluating the expression above?

- (A) true always
- (B) false always
- (C) true only when x is true and y is true
- (D) true only when x and y have the same value
- (E) true only when x and y have different values
- 20. Assume that x and y have been declared and initialized with int values. Consider the following Java expression.

```
(y > 10000) \mid \mid (x > 1000 \&\& x < 1500)
```

Which of the following is equivalent to the expression given above?

- (A) $(y > 10000 \mid | x > 1000) && (y > 10000 \mid | x < 1500)$
- (B) $(y > 10000 \mid | x > 1000) \mid | (y > 10000 \mid | x < 1500)$
- (C) (y > 10000) && (x > 1000) | x < 1500)
- (D) (y > 10000 && x > 1000) | | (y > 10000 && x < 1500)
- (E) (y > 10000 && x > 1000) && (y > 10000 && x < 1500)
- 21. Assume that x and y are boolean variables and have been properly initialized.

Which of the following always evaluates to the same value as the expression above?

- (A) x
- (B) y
- (C) x && y
- (D) x | | y
- (E) x != y
- 22. Assume that x and y are boolean variables and have been properly initialized.

$$(x \&\& y) || !(x \&\& y)$$

The result of evaluating the expression above is best described as

- (A) always true
- (B) always false
- (C) true only when x is true and y is true
- (D) true only when x and y have the same value
- (E) true only when x and y have different values

23. Consider the following code segment.

```
int x = /* some integer value */;
int y = /* some integer value */;
boolean result = (x < y);
result = ((x >= y) && !result);
```

Which of the following best describes the conditions under which the value of result will be true after the code segment is executed?

(A) Only when X < Y

- (B) Only when $x \ge y$
- (C) Only when x and y are equal
- (D) The value will always be true.
- (E) The value will never be true.
- 24. Assume that a, b, and c are variables of type int. Consider the following three conditions.

I.
$$(a == b) && (a == c) && (b == c)$$

II. $(a == b) || (a == c) || (b == c)$

III. $((a - b) * (a - c) * (b - c)) == 0$

Assume that subtraction and multiplication never overflow. Which of the conditions above is (are) always true if at least two of a, b, and c are equal?

- (A) I only
- (B) II only
- (C) III only
- (D) I and II
- (E) II and III
- 25. Assume that a and b have been defined and initialized as int values. The expression

$$! (! (a != b) && (b > 7))$$

is equivalent to which of the following?

Page 16 of 46

(E)

3 MCQ Boolean Expressions and if Statements

```
(A) (a != b) | | (b < 7)

(B) (a != b) | | (b <= 7)

(C) (a == b) | | (b <= 7)

(D) (a != b) && (b <= 7)
```

(a == b) && (b > 7)

26. Consider the following method.

```
public void conditionalTest(int a, int b)
{
  if ((a > 0) && (b > 0))
  {
    if (a > b)
      System.out.println("A");
    else
      System.out.println("B");
  }
  else if ((b < 0) || (a < 0))
      System.out.println("C");
  else
      System.out.println("C");
}</pre>
```

What is printed as a result of the call conditionalTest(3, -2)?

- (A) A
- (B) B
- (C) C
- (D) D
- (E) Nothing is printed.
- 27. Consider the following statement. Assume that a and b are properly declared and initialized boolean variables.

```
boolean c = (a \&\& b) || (!a \&\& b);
```

Under which of the following conditions will c be assigned the value false?

- (A) Always
- (B) Never
- (C) When a and b have the same value
- (D) When a has the value false
- (E) When b has the value false
- **28.** Consider the following code segment.

```
String alpha = new String("APCS");
String beta = new String("APCS");
String delta = alpha;
System.out.println(alpha.equals(beta));
System.out.println(alpha == beta);
System.out.println(alpha == delta);
```

What is printed as a result of executing the code segment?

false

(A) false

false

false

(B) false

true

true

(C) false

false

true

(D) false

true

true (E) true

true

29. Assume that object references one, two, and three have been declared and instantiated to be of the same type. Assume also that one == two evaluates to true and that two.equals(three) evaluates to false.

Consider the following code segment.

```
if (one.equals(two))
{
         System.out.println("one dot equals two");
}
if (one.equals(three))
{
         System.out.println("one dot equals three");
}
if (two == three)
{
         System.out.println("two equals equals three");
}
```

What, if anything, is printed as a result of executing the code segment?

- (A) one dot equals two
- - one dot equals two
- (D) one dot equals three two equals equals three
- (E) Nothing is printed.
- **30.** Consider the following code segment.

```
if (a < b || c != d)
{
         System.out.println("dog");
}
else
{
         System.out.println("cat");
}</pre>
```

Assume that the int variables a, b, c, and d have been properly declared and initialized. Which of the following code segments produces the same output as the given code segment for all values of a, b, c, and d?

```
if (a < b \&\& c != d)
         System.out.println("dog");
(A)
   else
         System.out.println("cat");
    if (a < b \&\& c != d)
         System.out.println("cat");
(B)
    else
         System.out.println("dog");
    if (a > b \&\& c == d)
         System.out.println("cat");
(C)
    else
         System.out.println("dog");
    if (a >= b || c == d)
         System.out.println("cat");
(D)
    else
    {
         System.out.println("dog");
    if (a >= b \&\& c == d)
         System.out.println("cat");
(E)
    else
    {
         System.out.println("dog");
```

31. Consider the following statement, which assigns a value to b1.

```
boolean b1 = true && (17 % 3 == 1);
```

Which of the following assigns the same value to b2 as the value stored in b1?

```
(A) boolean b2 = false || (17 % 3 == 2);
(B) boolean b2 = false && (17 % 3 == 2);
(C) boolean b2 = true || (17 % 3 == 1);
(D) boolean b2 = (true || false) && true;
(E) boolean b2 = (true && false) || true;
```

32. The question refer to the code from the GridWorld case study.

Consider the following code segment.

```
Location loc1 = new Location(3, 3);

Location loc2 = new Location(3, 2);

if (loc1.equals(loc2.getAdjacentLocation(Location.EAST)))

System.out.print("aaa");

if (loc1.getRow() == loc2.getRow())

System.out.print("XXX");

if (loc1.getDirectionToward(loc2) == Location.EAST)

System.out.print("555");
```

What will be printed as a result of executing the code segment?

- (A) aaaXXX555
- (B) aaaXXX
- (C) XXX555
- (D) 555
- (E) aaa

33. Consider the following code segment.

```
int num = /* initial value not shown */;
boolean b1 = true;
if (num > 0)
{
    if (num >= 100)
    {
       b1 = false;
    }
}
else
{
    if (num >= -100)
    {
       b1 = false;
    }
}
```

Which of the following statements assigns the same value to b2 as the code segment assigns to b1 for all values of num?

```
(A) boolean b2 = (num > -100) \&\& (num < 100);
```

- (B) boolean $b2 = (num > -100) \mid \mid (num < 100);$
- (C) boolean $b2 = (num < -100) \mid \mid (num > 100);$
- (D) boolean b2 = (num < -100) && (num > 0 || num < 100);
- (E) boolean $b2 = (num < -100) \mid \mid (num > 0 && num < 100);$
- **34.** Consider the following code segment.

```
int x = 3;
int y = -1;
if (x - 2 > y)
{
        x -= y;
}
if (y + 3 >= x)
{
        y += x;
}
System.out.print("x = " + x + " y = " + y);
```

What is printed as a result of the execution of the code segment?

- (A) x = -1 y = -1
- (B) x = 2 y = 1
- (C) x = 3 y = 2
- (D) x = 4 y = -1
- (E) x = 4 y = 3

35. Consider the following incomplete method.

```
public int someProcess(int n)
{
   /* body of someProcess */
}
```

The following table shows several examples of input values and the results that should be produced by calling someProcess.

Input Value n	Value Returned by someProcess(n)
3	30
6	60
7	7
8	80
9	90
11	11
12	120
14	14
16	160

Which of the following code segments could be used to replace /* body of someProcess */ so that the method will produce the results shown in the table?

```
I. if ((n % 3 == 0) && (n % 4 == 0))
  return n * 10;
else
  return n;
```

II. if
$$((n \% 3 == 0) || (n \% 4 == 0))$$

return $n * 10$;

return n;

III. if
$$(n \% 3 == 0)$$

if $(n \% 4 == 0)$
return $n * 10$;

return n;
(A) I only

- (B) II only
- (C) III only
- (D) I and III
- (E) II and III

36. Consider the following method.

```
public String inRangeMessage(int value)
{
  if (value < 0 || value > 100)
    return "Not in range";
  else
    return "In range";
}
```

Consider the following code segments that could be used to replace the body of inRangeMessage.

```
I. if (value < 0)
{
   if (value > 100)
     return "Not in range";
   else
     return "In range";
}
else
   return "In range";

II. if (value < 0)
   return "Not in range";
   else if (value > 100)
   return "Not in range";
```

else

```
III. if (value >= 0)
    return "In range";
    else if (value <= 100)
    return "In range";
    else
    return "Not in range";</pre>
```

return "In range";

Which of the replacements will have the same behavior as the original version of inRangeMessage?

- (B) II only
- (C) III only
- (D) I and III
- (E) II and III
- 37. The following method is intended to return true if and only if the parameter val is a multiple of 4 but is not a multiple of 100 unless it is also a multiple of 400. The method does not always work correctly.

```
public boolean isLeapYear(int val)
{
    if ((val % 4) == 0)
    {
       return true;
    }
    else
    {
       return (val % 400) == 0;
    }
}
```

Which of the following method calls will return an incorrect response?

- (A) isLeapYear(1900)
- (B) isLeapYear(1984)
- (C) isLeapYear(2000)
- (D) isLeapYear(2001)
- (E) isLeapYear(2010)

38. At a certain high school students receive letter grades based on the following scale.

Integer Score	<u>Letter Grade</u>	
93 or above	A	
From 84 to 92 inclusive	В	
From 75 to 83 inclusive	C	
Below 75	F	

Which of the following code segments will assign the correct string to grade for a given integer score?

```
I. if (score >= 93)
     grade = "A";
   if (score >= 84 && score <= 92)
     grade = "B";
   if (score >= 75 && score <= 83)
     grade = "C";
   if (score < 75)
     grade = "F";
II. if (score >= 93)
     grade = "A";
   if (84 <= score <= 92)
     grade = "B";
   if (75 <= score <= 83)
     grade = "C";
   if (score < 75)
     grade = "F";
III. if (score >= 93)
     grade = "A";
   else if (score >= 84)
     grade = "B";
   else if (score >= 75)
     grade = "C";
   else
     grade = "F";
```

- (A) II only
- (B) III only
- (C) I and II only
- (D) I and III only
- (E) I, II, and III

39. Consider the following code segment.

What is printed as a result of executing the code segment?

- (A) First
- (B) Second
- (C) Third
- (D) FirstThird
- (E) SecondThird

40. Consider the following code segment.

```
int start = 4;
int end = 5;
boolean keepGoing = true;
if (start < end && keepGoing)</pre>
     if (end > 0)
          start += 2;
          end++;
     else
          end += 3;
if (start < end)
     if (end == 0)
          end += 2;
          start++;
     }
     else
          end += 4;
     }
}
```

What is the value of end after the code segment is executed?

- (A) 5
- **(B)** 6
- (C) 9
- (D) 10
- (E) 16

41. Consider the following code segment.

```
int x = 7;
int y = 4;
boolean a = false;
boolean b = false;
if (x > y)
{
     if (x % y >= 3)
         a = true;
         x -= y;
     }
     else
         x += y;
}
if (x < y)
{
     if (y % x >= 3)
         b = true;
         x -= y;
     }
     else
     {
         x += y;
}
```

What are the values of a, b, and x after the code segment has been executed?

- (A) a = true, b = true, x = -1
- (B) a = true, b = false, x = 3
- (C) a = true, b = false, x = 7
- (D) a = false, b = true, x = 3
- (E) a = false, b = false, x = 11

42. Consider the following method.

```
public int pick(boolean test, int x, int y)
{
    if (test)
        return x;
    else
        return y;
}
```

What value is returned by the following method call?

pick(false, pick(true, 0, 1), pick(true, 6, 7))

- (A) 0
- (B) 1
- (C) 3
- (D) 6
- (E) 7

43. The price per box of ink pens advertised in an office supply catalog is based on the number of boxes ordered. The following table shows the pricing.

Number of Boxes	Price per Box	
1 up to but not including 5	\$5.00	
5 up to but not including 10	\$3.00	
10 or more	\$1.50	

The following incomplete method is intended to return the total cost of an order based on the value of the parameter numBoxes.

```
/** Precondition: numBoxes > 0 */
public static double getCost(int numBoxes)
{
   double totalCost = 0.0;
   /* missing code */
   return totalCost;
}
```

Which of the following code segments can be used to replace /* missing code */ so that method getCost will work as intended?

```
I. if (numBoxes >= 10)
{
    totalCost = numBoxes * 1.50;
}
    if (numBoxes >= 5)
{
     totalCost = numBoxes * 3.00;
}
    if (numBoxes > 0)
{
     totalCost = numBoxes * 5.00;
}
```

```
II. if (numBoxes >= 10)
{
    totalCost = numBoxes * 1.50;
}
else if (numBoxes >= 5)
{
    totalCost = numBoxes * 3.00;
}
else
{
    totalCost = numBoxes * 5.00;
}
```

```
III. if (numBoxes > 0)
{
    totalCost = numBoxes * 5.00;
}
else if (numBoxes >= 5)
{
    totalCost = numBoxes * 3.00;
}
else if (numBoxes >= 10)
{
    totalCost = numBoxes * 1.50;
}
```

- (A) I only
- (B) II only
- (C) III only
- (D) I and II
- (E) II and III

44. Consider the following code segment.

```
int a = 10;
int b = 5 * 2;
System.out.print(a == b);
```

What is printed as a result of executing the code segment?

- (A) 5
- (B) 10
- (C) 10 == 10
- (D) true
- (E) false

45. Consider the following code segment. Assume num is a properly declared and initialized int variable.

```
if (num > 0)
{
    if (num % 2 == 0)
    {
        System.out.println("A");
    }
    else
    {
        System.out.println("B");
    }
}
```

Which of the following best describes the result of executing the code segment?

- (A) When num is a negative odd integer, "B" is printed; otherwise, "A" is printed.
- (B) When num is a negative even integer, "B" is printed; otherwise, nothing is printed.
- (C) When num is a positive even integer, "A" is printed; otherwise, "B" is printed.
- (D) When num is a positive even integer, "A" is printed; when num is a positive odd integer, "B" is printed; otherwise, nothing is printed.
- (E) When num is a positive odd integer, "A" is printed; when num is a positive even integer, "B" is printed; otherwise, nothing is printed.

46. Consider the following method.

```
public static void message(int a, int b, int c)
{
    if (a < 10)
    {
        if (b < 10)
        {
            System.out.print("X");
        }
        System.out.print("Y");
    }
    if (c < 10)
    {
        if (b > 10)
        {
            System.out.print("Y");
        }
        else
        {
            System.out.print("Z");
        }
    }
}
```

What is printed as a result of the call message (5, 15, 5) ?

- (A) XY
- (B) XYZ
- (C) Y
- (D) YY
- (E) Z

47. Consider the following code segment.

```
double a = 1.1;

double b = 1.2;

if ((a + b) * (a - b) != (a * a) - (b * b))

{

System.out.println("Mathematical error!");

}
```

Which of the following best describes why the phrase "Mathematical error!" would be printed?

(Remember that mathematically $(a + b) * (a - b) = a^2 - b^2$.) (A) Precedence rules make the 1f condition true.

- (B) Associativity rules make the if condition true.
- (C) Roundoff error makes the if condition true.
- (D) Overflow makes the if condition true.
- (E) A compiler bug or hardware error has occurred.
- **48.** Assume that a and b are variables of type int. The expression

$$!(a < b) \&\& !(a > b)$$

is equivalent to which of the following?

- (A) true
- (B) false
- (C) a == b
- (D) a != b
- (E) !(a < b) && (a > b)

49. A school that does not have air conditioning has published a policy to close school when the outside temperature reaches or exceeds 95°F. The following code segment is intended to print a message indicating whether or not the school is open, based on the temperature. Assume that the variable degrees has been properly declared and initialized with the outside temperature.

```
if (degrees > 95)
{
         System.out.println("School will be closed due to extreme heat");
}
else
{
         System.out.println("School is open");
}
```

Which of the following initializations for degrees, if any, will demonstrate that the code segment may not work as intended?

- (A) degrees = 90;
- (B) degrees = 94;
- (C) degrees = 95;
- (D) degrees = 96;
- (E) The code will work as intended for all values of degrees.
- **50.** Consider the following code segment.

```
int x = 7;
int y = 3;

if ((x < 10) && (y < 0))
    System.out.println("Value is: " + x * y);
else
    System.out.println("Value is: " + x / y);</pre>
```

What is printed as a result of executing the code segment?

- (A) Value is: 21
- (B) Value is: 2.3333333
- (C) Value is: 2
- (D) Value is: 0
- (E) Value is: 1

51. Consider the following code segment.

```
int x = 7;
if (x < 7)
{
      x = 2 * x;
}
if (x % 3 == 1)
{
      x = x + 2;
}
System.out.print(3 * x);</pre>
```

What is printed as a result of executing the code segment?

- (A) 7
- **(B)** 9
- (C) 14
- (D) 21
- (E) 27

52. Consider the following code segment.

```
double regularPrice = 100;
boolean onClearance = true;
boolean hasCoupon = false;
double finalPrice = regularPrice;
if(onClearance)
{
    finalPrice -= finalPrice * 0.25;
}
if(hasCoupon)
{
    finalPrice -= 5.0;
}
System.out.println(finalPrice);
```

What is printed as a result of executing the code segment?

- (A) 20.0
- **(B)** 25.0
- (C) 70.0
- (D) 75.0
- (E) 95.0

53. Consider the following method.

```
public int someCode(int a, int b, int c)
{
   if ((a < b) && (b < c))
    return a;
   if ((a >= b) && (b >= c))
    return b;
   if ((a == b) || (a == c) || (b == c))
    return c;
}
```

Which of the following best describes why this method does not compile?

- (A) The reserved word return cannot be used in the body of an if statement.
- (B) It is possible to reach the end of the method without returning a value.
- (C) The if statements must have else parts when they contain return statements.
- (D) Methods cannot have multiple return statements.
- (E) The third if statement is not reachable.

54. Consider the following method.

```
public void test(int x)
{
  int y;
  if (x % 2 == 0)
    y = 3;
  else if (x > 9)
    y = 5;
  else
    y = 1;
  System.out.println("y = " + y);
}
```

Which of the following test data sets would test each possible output for the method?

- (A) 8, 9, 12
- (B) 7, 9, 11
- (C) 8, 9, 11
- (D) 8, 11, 13
- (E) 7, 9, 10
- **55.** Consider the following statement.

boolean
$$x = (5 < 8) == (5 == 8);$$

What is the value of \times after the statement has been executed?

- (A) 3
- **(B)** 5
- (C) 8
- (D) true
- (E) false
- **56.** Consider the following Boolean expression in which the int variables x and y have been properly declared and initialized.

$$(x \le 10) == (y > 25)$$

Which of the following values for x and y will result in the expression evaluating to true?

- (A) x = 8 and y = 25
- (B) x = 10 and y = 10
- (C) x = 10 and y = 30
- (D) x = 15 and y = 30
- (E) x = 25 and y = 30

57. Vehicles are classified based on their total interior volume. The classify method is intended to return a vehicle classification String value based on total interior volume, in cubic feet, as shown in the table below.

Vehicle size class	Total interior volume
Minicompact	Less than 85 cubic feet
Subcompact	85 to 99 cubic feet
Compact	100 to 109 cubic feet
Mid-Size	110 to 119 cubic feet
Large	120 cubic feet or more

The classify method, which does not work as intended, is shown below.

```
public static String classify(int volume)
{
    String carClass = "";
    if (volume >= 120)
    {
        carClass = "Large";
    }
    else if (volume < 120)
    {
        carClass = "Mid-Size";
    }
    else if (volume < 110)
    {
        carClass = "Compact";
    }
    else if (volume < 100)
    {
        carClass = "Subcompact";
    }
    else
    {
        carClass = "Minicompact";
    }
    return carClass;
}</pre>
```

The classify method works as intended for some but not all values of the parameter volume. For which of the following values of volume would the correct value be returned when the classify method is executed?

- (A) 80
- **(B)** 90
- (C) 105
- (D) 109
- (E) 115

- **58.** The following categories are used by some researchers to categorize zip codes as urban, suburban, or rural based on population density.
 - An urban zip code is a zip code with more than 3,000 people per square mile.
 - A suburban zip code is a zip code with between 1,000 and 3,000 people, inclusive, per square mile.
 - A rural zip code is a zip code with fewer than 1,000 people per square mile.

Consider the following method, which is intended to categorize a zip code as urban, suburban, or rural based on the population density of the area included in the zip code.

```
public static String getCategory(int density)
{
    /* missing code */
}
```

Which of the following code segments can replace /* missing code */ so the getCategory method works as intended?

```
I. String cat;
   if (density > 3000)
   cat = "urban";
   else if (density > 999)
   cat = "suburban";
   }
   else
   cat = "rural";
   return cat;
II. String cat;
   if (density > 3000)
   cat = "urban";
   if (density > 999)
   cat = "suburban";
   cat = "rural";
   return cat;
III. if (density > 3000)
   {
      return "urban";
   if (density > 999)
```

```
{
    return "suburban";
}
return "rural";
```

- (A) I only
- (B) III only
- (C) I and II only
- (D) I and III only
- (E) I, II, and III
